Career Objectives in applying to this M.Tech. (Software Systems) program

I am presently working with Happiest Minds Technologies Ltd. as an Engineer. I have been associated with this organization for almost 2 years now serving at different roles. Through Happiest Minds, I work as a Machine Learning Engineer at Mercedes Benz Research and development Centre, Bengaluru. I have learnt a lot over the years and hope to continue doing that all through my career.

I am aware of the advantages of attending the Masters curriculum by BITS, Pilani. This program will improve my technical skills, which will obviously help me in my career. I intend to make the best use of this course and do specialization in Data Analytics to become a better professional in my career. Masters will also enhance my scope for further studies.

I can manage my work over the working days of the week and concentrate on the course over the weekend. This also means that I can continue to work and fund my studies simultaneously, which is surely a source of great self-satisfaction and independency. This will be the first stepping-stone towards higher studies after my degree, which I had completed in last year. I sincerely look forward to an association with your esteemed institute to help me improve my skills and advance in my career
